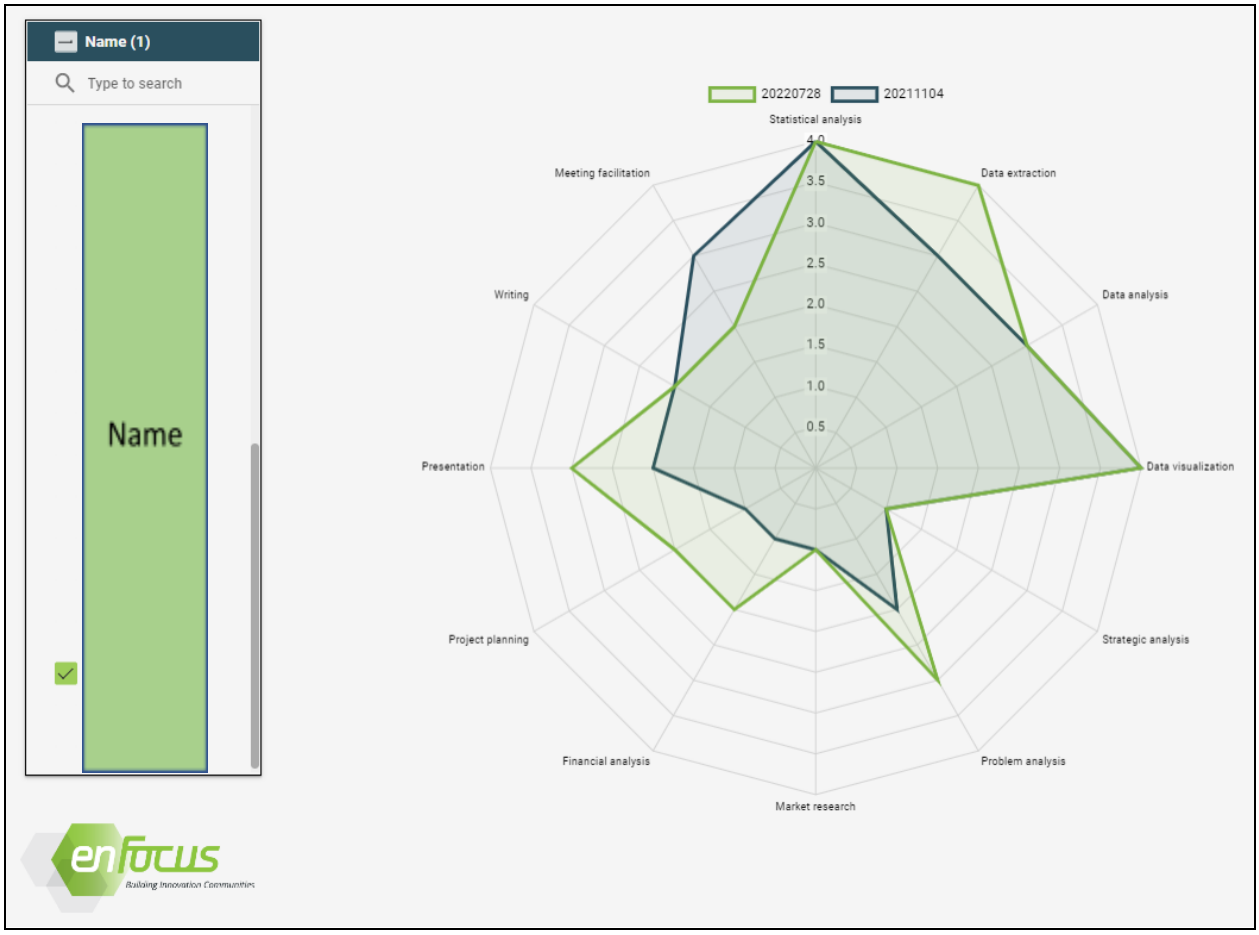
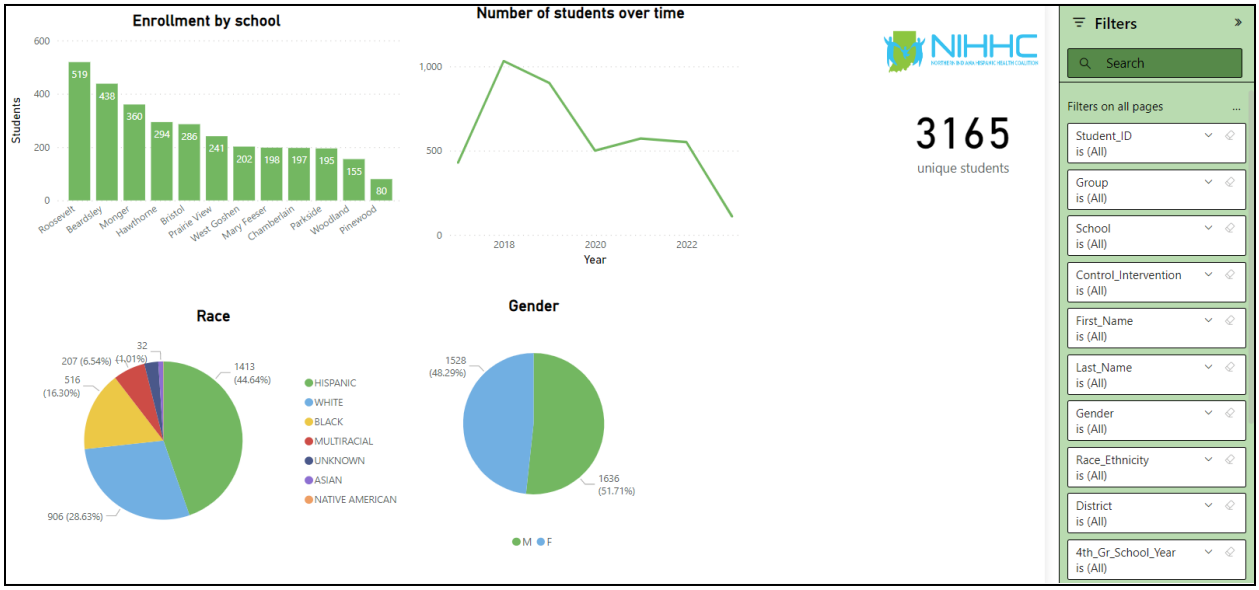
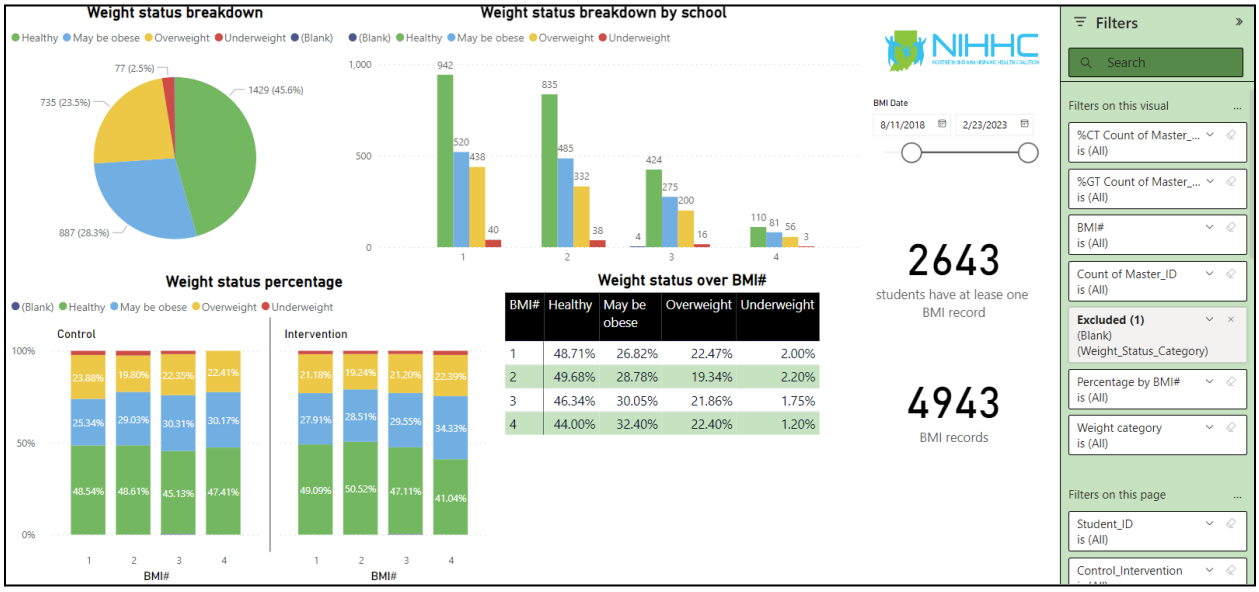
enFocus Fellows Professional Development Evaluation

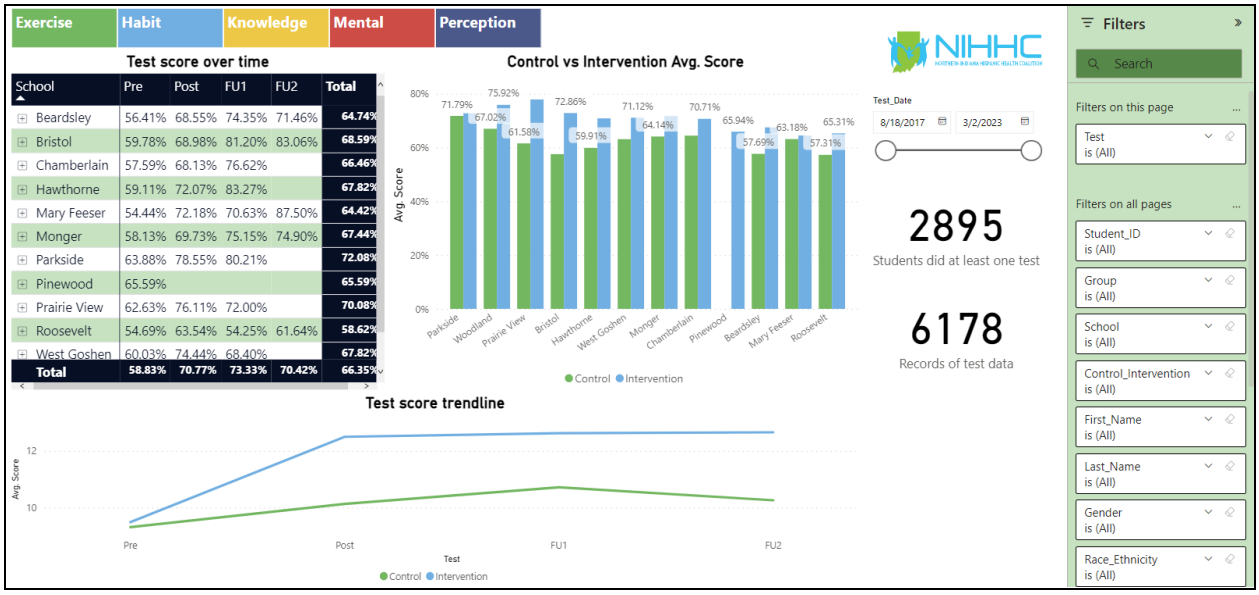


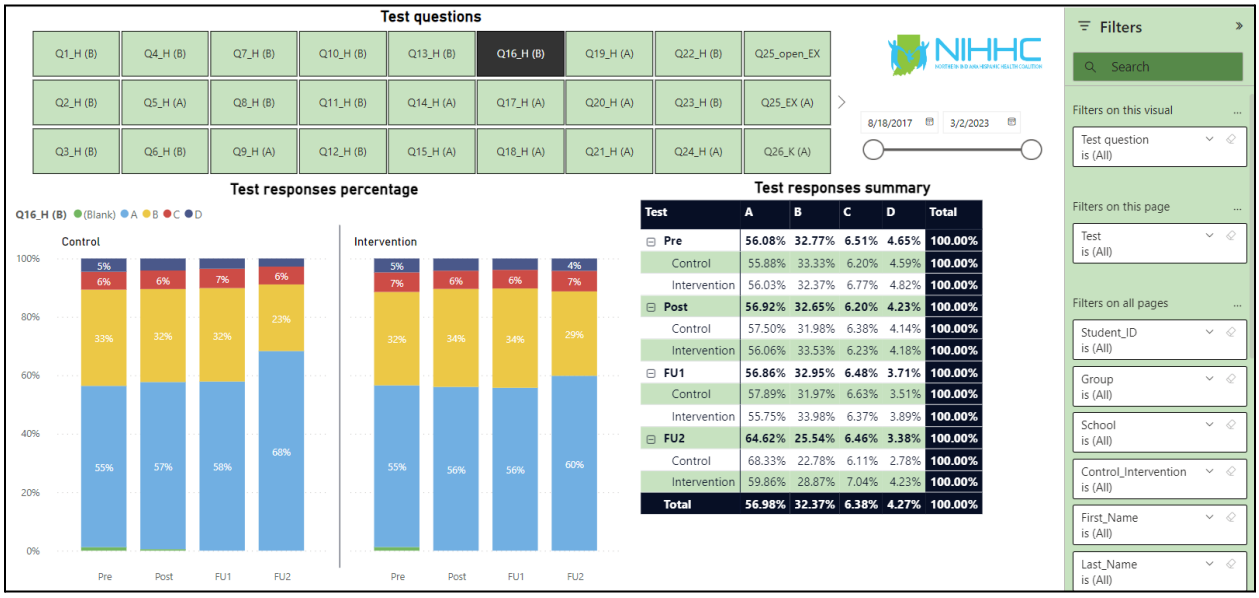
This dashboard provides a big picture of enFocus employees' professional development progress. This first page visualizes individual progress on the 3 professional development areas (data analytics, business acumen, project mgmt.). The second page highlights progress over time. The dashboard can be filtered by employee names, which are masked to protect anonymity. The data source is scheduled to refresh everyday to display real-time data.

Northern Indiana Hispanic Health Coalition - Healthy Hearts Program



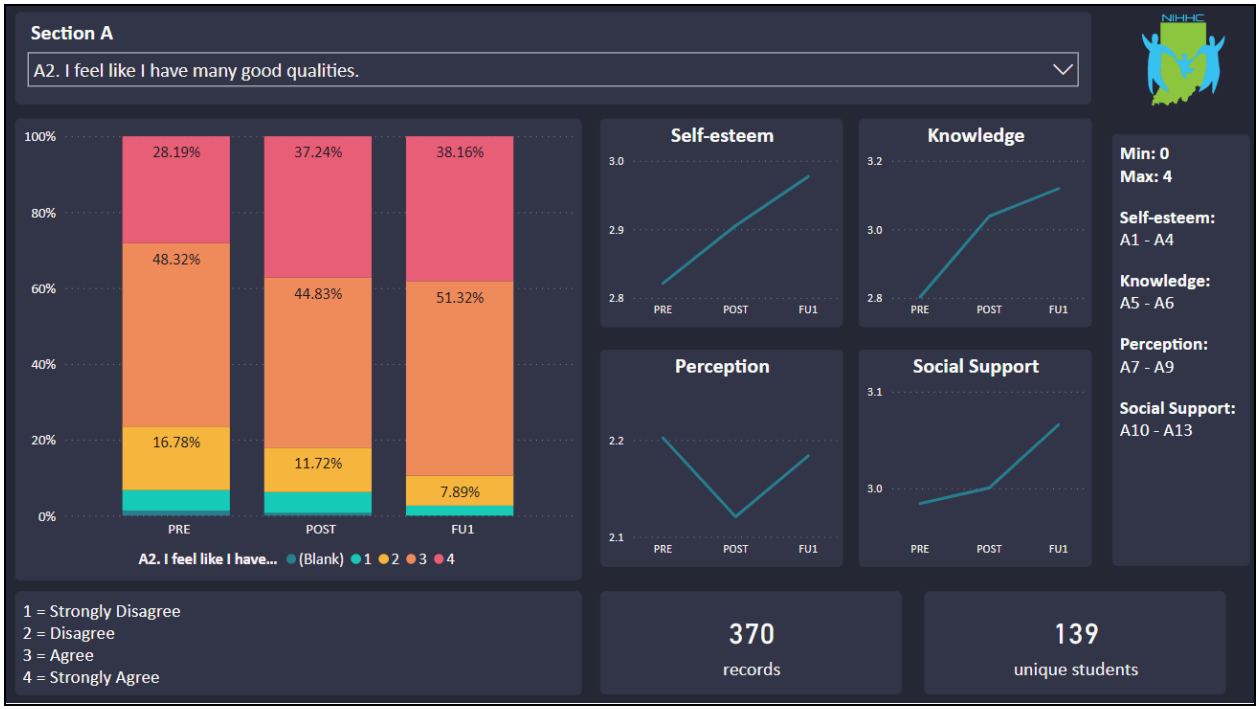


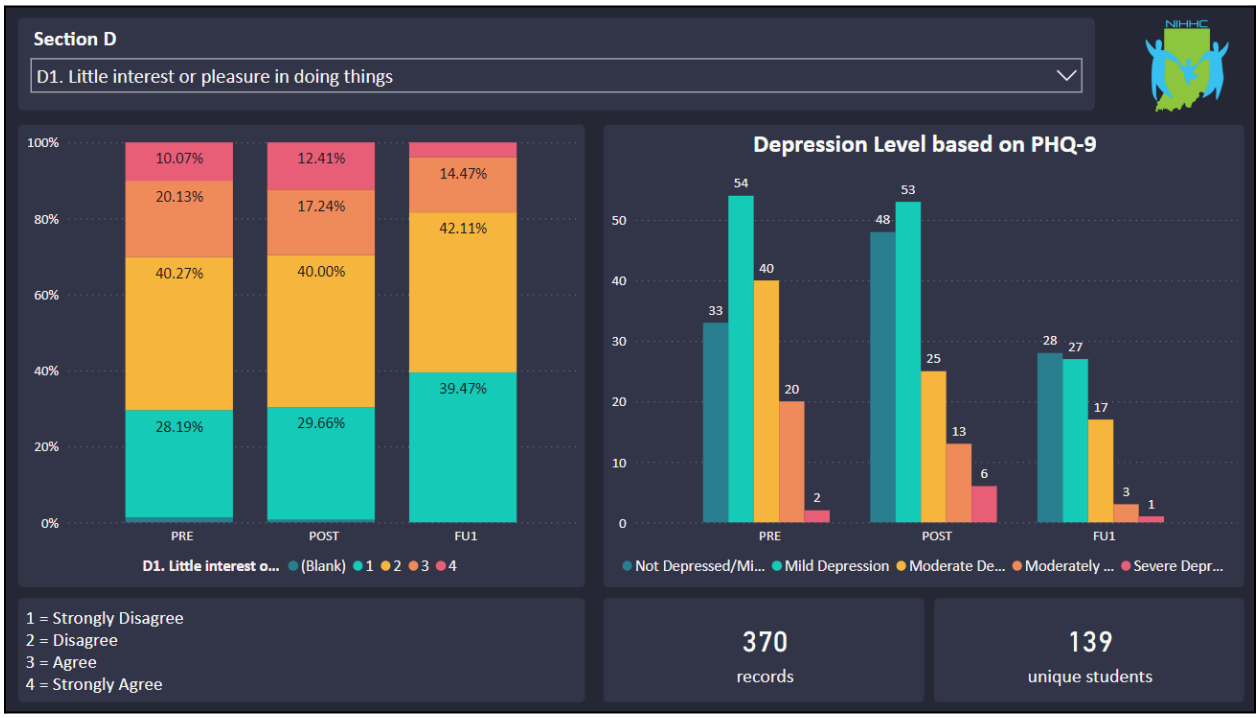


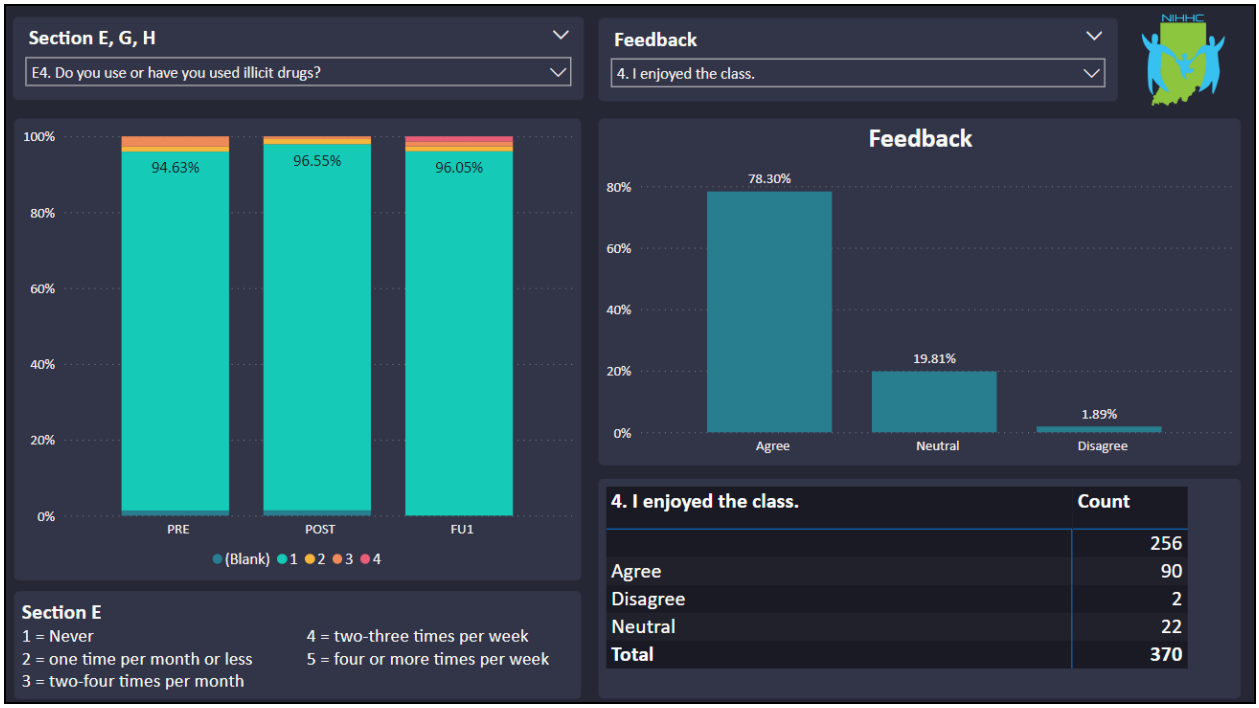


This dashboard contains 8 years of program data to determine the effectiveness of a 6-week health intervention known as “Healthy Hearts”. The dashboards capture the students’ demographic info, BMI data, and results from a test that is conducted before and after the health intervention program. Students fill up an online form that feeds data into the SharePoint database, which is then reflected on this dashboard. This dashboard also refreshes automatically every day.

Northern Indiana Hispanic Health Coalition - Bienvenido Program Dashboard







Similar to the “Healthy Hearts” dashboard, this dashboard captures the effectiveness of a 9-weeks mental health intervention program called “Bienvenido”. “Bienvenido” targets Hispanic immigrant teens that are seeking asylum in the US. This dashboard captures teens’ mental state progress throughout the program, using the PHQ-9 questionnaire. The dropdown menu at the top of the page allows users to interact with the visuals based on the selections they make. This dashboard is also fully automated across the ETL process.
